

WINDOW SECURITY (continued)

SLIDING WINDOWS (slides horizontally)

- There are several styles of key locks that suit sliding windows. It is a good idea to fit a metal or wooden rod in the lower track of the window to give added protection.
- Ensure your windows are able to be locked open at a gap of not more than 10cm wide.
- Horizontal sliding aluminium doors and windows can be lifted out of their tracks. This can be prevented by fitting self-tapping screws along the upper track or on the sliding frame.

Sliding window push lock

GATE LOCK

A locked gate can deter an intruder from entering your front or rear yard. It can also provide good security for young children and pets from leaving your yard.

KEYS

- Keys should be kept in a safe location and out of sight.
- Ensure window and door locks are 'keyed alike'.
- Do not hide spare keys outside.
- Keys should be removed from locks while you are absent.
- Consider leaving keys with a trusted friend, family or neighbour (emergency set).

The SAPOL Home Assist Program is a Commonwealth Home Support Program (CHSP) that is funded by the Australian Government. The aim of the program is to improve home security and personal safety of eligible service users to allow them to remain safely in their homes. SAPOL works together with local councils, health services and other agencies to support CHSP service users.

The South Australian Government supports SAPOL to deliver services to people living with a disability and their carers.

LIGHTING

Consider installing external sensor lighting as it improves the vision of your yard and may deter thieves. LED light globes with an in-built motion sensor are easy to install.

DOOR SECURITY

DOOR VIEWER

Consider installing a door viewer (wide angled) as it provides you with the opportunity to see who is standing at your door without having to open it.

HINGED DOORS

The most secure and safest lock for securing an external door is one with a safety release. They allow you to escape from an internal house fire or emergency without having to unlock the door with a key.

Deadlatch

A key-in lever lock should be supported by the addition of a double-cylinder deadbolt. One key should operate both locks.

Double-cylinder deadbolt is operated by a key on both sides of the door

DOUBLE DOORS

Secure your double or French door with:

- a drop-pin deadlock with a 'latching' facility
- key operated bolts; or
- a deadlatch.

Drop-pin deadlock

SLIDING DOORS

Sliding doors can be secured in two simple ways by fitting:

- a double-sided locking handle or deadbolt lock and/or
- a patio door bolt.

Patio door bolt

SECURITY SCREEN DOORS

A locked security door provides a barrier when talking to people at the front door. The most effective security doors are fitted with:

- a three-point locking facility
- three fixed hinges
- sturdy one-way mesh with a perspex lock protector.

A security door should be measured to ensure a tight fit.

Perspex lock protector

The best option is to install deadlocks which can be opened from the inside without keys.

Adequate door and window locks can help keep you stay safe inside and deter thieves from breaking into your home.

WINDOW SECURITY

WOODEN SASH/DOUBLE HUNG WINDOWS (move vertically)

- These windows are fitted in older homes and are secured with a catch in the centre. This catch can be easily manipulated or jimmied open.
- A key lock security bolt best secures the window. When secured on the frame the bolt passes through both window frames.
- Another option for windows that are not used is to secure them shut permanently.

Multi purpose bolt

AWNING WINDOWS (hinged from top) and CASEMENT WINDOWS (hinged on the side)

- A lockable window winder can be used to secure these windows but do not allow good security when locked in the open position.
- An awning window lock can be fitted.
- Or consider fitting security locks in windows (one in each corner) which use the strength of the frame to resist being jimmied open.

Awning window lock

LOUVRE WINDOWS

Louvers pose a greater security risk and should be replaced with some other form of window or fitted with security mesh or bars (on the inside).
